Art Unit: 3676

#### **DETAILED ACTION**

### Claim Objections

Claim 1 is objected to because of the following informalities: in line 11, "of a pair" seems out of place. Appropriate correction is required.

# Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States

Claims 1, 2, and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by Arora, US No. 6,364,316 ("Arora").

Arora discloses a shaft seal mechanism (FIG. 4) constructed such that a plurality of thin plates (24) are arranged in an annular space between a rotor (15) and a stator (12) so as to form a thin plate assembly of an annular shape, said thin plates have their outer circumferential proximal end (FIG. 4) side supported to the side of said stator (FIG. 1) and their inner circumferential distal end side non-fixed to an outer circumferential surface of said rotor (15) so that said thin plate assembly of the annular shape divides said annular space between said rotor and said stator into a higher pressure side area and a lower pressure side area and the outer circumferential

proximal end side of each of said thin plates is pinched (via 32, i.e. clamping the assembly together) to be retained between thin plate retaining rings (20, 28), having a flexibility, of a pair.

The outer circumferential proximal end side of each of said thin plates is pinched to be retained between said thin plate retaining rings via a deviation preventing member (32) that regulates a motion (i.e. 32 fixes the seal assembly) of each of said thin plates relative to said thin plate retaining rings.

## Allowable Subject Matter

Claims 3 and 5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Enoch E Peavey whose telephone number is 305 1977. The examiner can normally be reached on Mon-Fri 8:00 am to 4:30 am.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Judy Swann can be reached on (703) 306-4115. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Application/Control Number: 10/849,023

Art Unit: 3676

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
